

**AMENDMENTS****In the specification:**

On page 14, please amend the paragraph beginning on line 2 as follows:

We have discovered a monoclonal anti-idiotypic antibody, 11D10, which escapes immune tolerance and induces a specific immune response against a distinct and specific epitope of human milk fat globule (HMFG), a breast cancer-associated antigen. The immune response elicited by 11D10 typically comprises both humoral and cellular responses. Thus, 11D10 is expected to be useful in treating HMFG-associated disease. A hybridoma that produces 11D10 has been deposited with the American Type Culture Collection (ATCC™), 10801 Parklawn Drive, Rockville, MD, U.S.A. 20852 on January 17, 1996 under the provisions of the Budapest Treaty for the International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure. It was accorded Accession Number 12020. A complete description of 11D10, including its generation and characterization, is found in commonly-owned patent application serial number 08/575,762 (U.S. Provisional Application number [[\_\_\_\_]] 60/031,306).
